Site B discharges under a consent

SITE FLAGS

SITE A High water stress

SITE B Consented discharge

SITE C High water stress

SITE D Flood Zone 3

E, F No flags at screening level

WHAT THIS MEANS

Most of your exposure sits in your supply chain, not at your sites. Upstream ratings use sector and country averages, so the next step is to replace them with what your named suppliers do and where they source from. You report under International Sustainability Standards Board (ISSB) standards, so these are the rows a reviewer will ask about first.

WHAT THIS SCREEN CAN'T TELL YOU

Nothing here comes from a site visit or your suppliers. It shows where to look first. It is not a Taskforce on Nature-related Financial Disclosures (TNFD) disclosure or a materiality assessment.

HOW WE RATED IT

Red: high sector materiality and a sensitive location or source. Amber: one of the two. Green: neither.

Next step: LEAP Locate and Evaluate

Your named suppliers and site data, mapped and assessed. A fixed fee, agreed after a short scoping call. If you are in Energy Savings Opportunity Scheme (ESOS) Phase 4 scope, we start from your audit's site register.

About Hyphora

Hyphora is an independent climate and nature advisory practice. We help organisations turn energy and nature obligations into funded, managed action, from ESOS audits to TNFD-aligned nature assessments. Founded by Ben Hart, Chartered Energy Manager, with 18 years across energy, climate and nature.
